

See how many attractions will appear in 2022 in Energylandia!

We have found the latest information on the development of the Energylandia Amusement Park in Zator for 2022. As it turns out, the recently announced **new, 7th zone, Sweet Valley** is only one of the three planned investments for this year! Information about the **Wonder Wheel** has recently appeared on Energylandia's social networks. It is a unique, 53-meter-high structure. The Water Park will be expanded by the fourth **Bamboo Bay** module with 16 new water slides.

The expansion of Energylandia and its attractions is the foundation of development, which has been noticeable from the very beginning of our Amusement Park's operation, i.e. from July 2014. - Kris Kojder, Energylandia's spokesman tells us. See what changes will affect the map of the Amusement Park in Zator! Read more...

Wonder Wheel

In January this year, the front of works was opened, separating the space for the construction of the first ferris wheel in Energylandia, which will be located in the Dragon Zone, architecturally referring to the land of fantasy. Construction companies have already laid the foundations for the white structure of an amusement circle, distinguished from the wooden Zadra roller coaster. **Wonder Wheel**, because that is the name of the ferris wheel, will therefore become the second flagship attraction of this zone. The location was not accidental, as there were numerous arguments in favor of the location of the white circle, among them the view covering essentially the entire Amusement Park should be mentioned. The **53-meter high structure** will allow you to admire the panorama of the Little Kids Zone, Family and Extreme zones as well as from a slightly closer perspective, daredevils rushing along the neighboring Zadra track or nearby Mayan (extreme, red roller coaster with 5g forces and five inversions). We will also look at Sweet Valley

dedicated to the youngest guests - the new, seventh zone of Energylandia, the premiere of which is also planned for the upcoming 2022. The manufacturer of the Wonder Wheel is the Dutch company Dutch Wheel, a leader in the production of this type of attractions. The one delivered to Energylandia will be a stationary version dedicated to amusement parks. Those interested in traveling one of the 30 gondolas will certainly not be missing, because the combined view of the amusement park and the beautiful mountain range of the Beskids cannot be found anywhere else! Who knows, maybe in such a place someone will want to declare their love to their other half. No one will run out of time for this or any other declaration, because the speed of the gondola will be 1.5 m/s, which gives about 5.4 km/h. Thanks to this, passengers of this huge white "toy" will be able to enjoy the breathtaking view in peace!

Below is a summary of the Wonder Wheel's technical parameters:

| Ferris wheel | Wonder Wheel |
|---|---|
| height | 53 m |
| number of spokes | 15 |
| number of gondolas | 30 |
| number of passengers in the gondola | 8 |
| the direction of rotation (viewed from the front) | counterclockwise |
| speed | 1,5 m/s i.e. 5,4 km/h |
| manufacturer | Dutch Wheels |
| Type of ferris wheel | version for amusement parks - stationary |

Bamboo Bay – 4th part of the Water Park

In summer, the most popular attractions are the water ones, which is why Zator, and more precisely Energylandia, so often and willingly becomes a holiday destination for tourists from all over Poland, as it combines an amusement park and a water park, thus giving the opportunity to use various attractions within one admission ticket.

The Exotic Island, which was put into operation last year, with two swimming pools (including a paddling pool for toddlers with a depth of 30 cm) and 5 water slides, will be extended this year by a new part with the equally exotic name Bamboo Bay. Thus, the Water Park zone will combine 4 modules taking into account the previously presented Tropical Fun and Big Milk Water Park. The representatives of Energylandia assure that this is not the end of the water expansion, and that the further development of the water park will include the covered area. They do not reveal the details yet.

Bamboo Bay will house a twin structure of 16 water slides, the central link of which will be the so-called "six-track" connecting the visually developed water slides in terms of form and passage. Unlike the slide at Tropical Fun, here we will only use the slide in bathing suits, without the use of pontoons, and this should increase the rotation of participants in this game! After the opening of Bamboo Bay in Energylandia, the water zone will include as many as 36 water slides accompanying 5 pools and over 4,000 sun loungers on the sandy beach.

Sweet Valley – the seventh zone will be for children!

The family character of the largest amusement park in Central Europe will be emphasized in the coming season by the Sweet Valley candy zone, where the designers took into account the preferences of the youngest. Thanks to both, the presented forms, and colors of the scenography, the kids will feel like in the most wonderful land of fairy tales! The decorations will reveal the way to even more wonderful 10 attractions, which will be abundant in "Sweet Valley". The flagship attraction for parents with children will be Choco Chip Creek - a family roller coaster in the shape resembling a steam train, emerging from the "cookie" mine. The image of the visualization itself looks like "taken out" from the cover of a favorite children's book, and this is just the beginning. Ride on a 1,200-meter track at a maximum

speed of 55 km/h on a structure that elevates passengers to a height of 16.5 meters will be a lot of fun and will cause a wave of smiles. Children will also enjoy a ride on a smaller brother - Honey Harbour, a roller coaster belonging to the lower models, whose carriages will speed up to 46 km/h. Its height will be 11.7 meters and the track length will be 254 meters.

Fun fact! Although Energylandia is already the No. 1 roller coaster park in Europe, after the premiere of two new roller coasters, it will strengthen its position by counting as many as 20 attractions of this type!

The unveiling of the Sweet Valley Zone is planned in two stages. The first involves the presentation of attractions for the use of guests, among which, in addition to the above-mentioned roller coaster, there will be: a twisted carousel with Twis'Tea cups, a ride on stylized Mini Track'Tour tractors loved by children, a Crazy Barn rotating house growing on a crow's feet, and three different carousels: Bon Balloon, resembling a "magic" tree, Candy Critters or the classic, storied Candy Carousel. There will also be Bumble Boats, which will allow you to get into small water logs that can accommodate 3 children or 1 adult with a child. The second stage, fully revealing the new zone, will be a large, multifunctional restaurant and entertainment building, which will allow the for dinners with an artistic show, popular in European amusement parks. The Sweet Valley Town Hall Theater will seat 1000 people at a time, and its function will complement the tasty character of the "Sweet Valley".

Energetic magnet for active entertainment!

Active recreation in an amusement park, whether during weekend trips, several-day family trips, business team-building trips or finally class trips, has become more and more popular, not to mention holiday goals! Energylandia is the largest facility of this type in Poland, which every year adds new attractions to its guests, enriching the possibility and variety of fun on this great "playground" for whole families. From February 22, you can get reduced admission ticket prices by PLN 20, and the terms and conditions of this promotion are available [HERE](#). Several-year-old children love this place, and their parents confirm that it is one of the best memories! It is worth recalling that

many families have the Tourist Voucher left to use, which can be easily redeemed in Energylandia. We especially recommend using the easy-to-use on-line version available on the website bon.energylandia.pl. In a few steps you can place an order, use the voucher, and receive tickets to the e-mail address provided. The electronic form also makes it easier to enter Energylandia, because you only need to show the ticket on your phone to go through the gate of the Park and enjoy all the attractions. And there will be quite a lot of these in 2022. *This year will be the "premiere year", thanks to which we will be able to boast a total of 133 attractions, 27 of which will be new products: 16 Bamboo Bay water slides, 10 Sweet Valley attractions, including 2 roller coasters, and the Wonder Wheel.* - summarizes Kris Kojder.
